Polyguard® Overseal-H™
Horizontal Waterproofing Membrane

Features & Benefits

- Single component ease of application.
- STPE membrane
- Caustic resistant for applications beneath poured concrete slabs and cementitious setting beds.
- Self-leveling.
- Crack bridging over a wide temperature range.
- VOC compliant at <20 g/l.
- Full cure-through with high-build applications.
- Tolerant to moisture in the concrete.*

* Overseal-H™ can be applied to concrete that has elevated levels of moisture content without adversely affecting the cure of the coating; however, if a vapor drive is created during the curing of the Overseal-H, pinhole of the coating will occur. For best results, application of Overseal-H directly to concrete, should be done during the cooling phase of the structure.
