
Polyguard[®] Mechanical Products

Innovation based. Employee owned. Expect more.

Founded in 1953, Polyguard has a long history of specializing in products that protect insulation and piping systems from weather, moisture drive, corrosion, and other undesired contaminants. The company was founded on the basic principles of being a successful leader in the industry and being dedicated to its employee owners, qualities which are still the foundation of the company today.

Innovation Based

We take pride in the fact that the vast majority of our sales to the mechanical, refrigeration, HVAC and engineering specifiers are products that Polyguard invented for specific needs in that market. We are constantly striving to respond to the needs of the industry with creative solutions.

Employee Owned

Polyguard is 100% employee owned. Being an employee owned company creates a unique culture of team work and ownership that ensures top quality performance, not only from our products, but more importantly, from our employees.

Expect More

Polyguard as a company has experienced 20 successive years of increase in our annual sales. We attribute this unprecedented growth to many successful innovations in our product lines, as well as extremely high levels of employee capabilities and commitment.

Proven Industry Leader

Mechanical Division - Product Offerings

Alumaguard® Products

Introduced as Alumaguard 60 over 16 years ago, the Alumaguard family, of exterior and more recently indoor vapor and weather barrier products, has grown to include Alumaguard Lite, Alumaguard Cool Wrap, and Alumaguard Lite White. For any outdoor duct or piping system, we have the product you need.

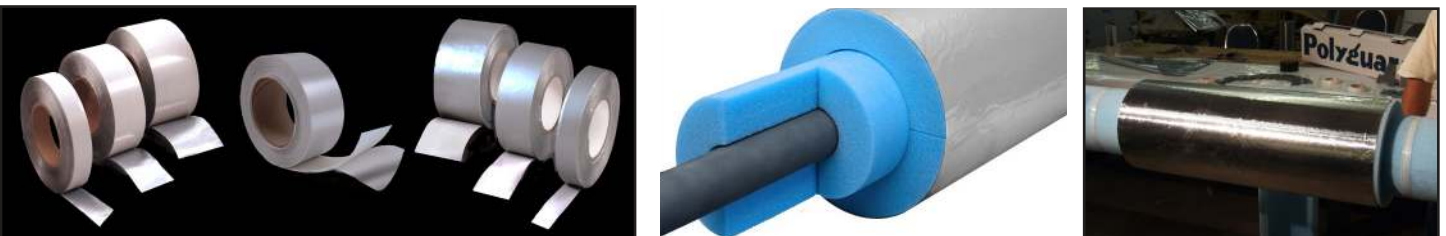

Insulrap™ Products

Introduced in 1950, the Insulrap family of products offers 2 solutions to designers; a self-healing vapor retarder for under metal jacketing, and a self-healing vapor retarder for direct burial applications. Beginning with 2 products, the line now includes 7 products; all of which are now true zero perm vapor barriers ranging from 30 mils to 125 mils in thickness. The newest version is Insulrap JB utilizing a proprietary butyl compound for LNG systems.

ZeroPerm® Products

Introduced as a silver product, ZeroPerm is now silver/white reversible. It is complemented by standard tape and self-wound tape used as an economical primary vapor barrier on cold systems.

RG-2400™ Products

RG-2400 has successfully been used as a solution for the Corrosion Under Insulation (CUI) problem for 30 years. With a proven history of stopping corrosion, major food producers and petro-chemical companies are benefiting from reduced down time and significant cost savings.
